Who We Are

• A neutral and independent lab that tests networking and data communications products for businesses across the globe.
• Started in 1988 on the University of New Hampshire Durham, NH campus.
• Non-profit organization and 100% funded by commercial industry with over 150+ member companies.
• State of the art facility with 28,000+ sq. ft. (1 hour outside Boston, USA).
• 4,200 sq. feet of pre-wired space dedicated to Plugfests.
We are made up of full time staff and students.
Our Mission

To provide a neutral environment to foster multivendor interoperability, conformance to standards, and improvement of data networking while attracting students to, and educating them for, future employment in cutting-edge technologies.
Training Future Engineers

• More than 120 graduate and undergraduate student employees work with our staff, gaining hands-on experience with developing technologies and products.
• Our student employees average a 99% job placement, often before they graduate.
• We provide career advancement opportunities including tech talks, training for common industry tools, networking events and an online resume binder.
What We Do

• We enable multivendor interoperability, conformance testing and develop custom testing solutions.

• Through our industry involvement we are able to provide guidance and insight into new technology areas with testing needs and certification for testing programs.

• Promote early adoption through collaborative group testing (Plugfests).

• Offer members access to our world-class, multi-million dollar shared test bed which continues to grow.

• Funded 100% by commercial industry.
Member Companies
Who We Work With

We work with companies in over 35 countries across 5 continents

Simply ship your device and we will take care of the rest! Engineers are not required to be present during testing.

Technology Testing Areas

**Home Networking**
- DLNA & RVU
- TR-069
- IPv6 CE Router
- Wireless

**IP Networking**
- IPv6
- Routing/SDN
- SIP
- IoT

**Broadband Systems**
- DSL
- G.fast
- GPON
- VDSL2 Vectoring

**Storage**
- Fibre Channel
- iSCSI
- NVMe
- PCIe
- SAS
- SATA

**Open Networking**
- Open Networking Test Service (OCP)
- OpenFlow (ONF)

**Mobile/Wireless**
- MIPI
- Wireless

**Ethernet/Enterprise**
- Power over Ethernet
- 40/100 Gigabit
- Backplane
- 10 Gigabit
- Automotive
- Gigabit
- Fast
- 10BASE-T
- Cable/Channel Testing

**Switching/Timing**
- AVnu
- IEEE 1588
- Ethernet Switching Protocols
- Automotive Networking
- Carrier Ethernet
How to Work with Us

- We bring together key players of networking technologies, providing services that are critical to driving multivendor interoperability and increasing user confidence.
- We will work with you to create custom and flexible testing options to meet your needs as well as Pay Per Test options.
- Our most popular model is through annual memberships. Here are some key features our memberships include:
  - Access to custom test equipment and software
  - Neutral testing environment (no technology is favored over another)
  - Industry recognized test reports for sales and certification
  - Increased confidence in your product through our testing services
  - Reduced time to market
Products and Solutions

- We develop test tools to help us achieve our vision of being the world's premier data networking resource.
- Our tools have become an invaluable component of our testing services and through membership or direct purchase, these tools can be used in your own labs.
  - IOL INTACT™ the same tool used for IPv6, IPsec, Routing, and Home Networking testing
  - MIPI Boards test fixtures performing M-PHY, C-PHY, D-PHY, DSI, and CSI-2 testing
  - IOL INTACT™ for gPTP and vIOLett™ for AVnu testing
  - IOL INTERACT™ software expedites and automates the testing of NVMe SSDs
  - BitPhyer and BitPhyer 10G for Copper Auto-Negotiation, Clause 40 PMA and 10BASE-TX TP-PMD
  - IOL vIOLett™ 802.1 Core Test Software for Ethernet Switching Protocols (ESP)
