

## Testing Services

We are focused on offering testing services that reduce the time to market for our customers and accelerate the interoperability of SDN and Routing protocols. Our team has experience with numerous routing protocols and access to an extensive test bed to validate use cases and ensure interoperability.

### Testing Solutions for:

- Switches
- OpenFlow SDN Controllers
- SDN Applications
- ONF OpenFlow® Cert
- Q-SYS Network Switch Qualification
- Legacy IPv4 Routing Protocols

## Industry Certifications & Interoperability

We have a large multi-vendor switch inventory to validate use cases and solutions to ensure interoperability.

We have partnered with QSC to offer independent network switch qualification services. We have developed tests that define the metrics and methodology used to verify a network switch is capable of handling high levels of Q-SYS traffic without a drop-in performance or quality.

We are an approved laboratory for the following industry product certification test programs.

- Open Networking Foundation (ONF) OpenFlow® Conformance
- Q-SYS Network Switch Qualification

## Key Benefits

- Increased confidence in your product.
- Save money by reducing time to market.
- Use industry recognized test reports for sales and certifications.
- Access to custom test equipment and software saving you time and money.
- Ability to shape our roadmap to better serve industry needs.
- Ability to test multiple standards against globally recognized products all in one lab.
- Acts as an extension of in-house test labs providing debugging and technical expertise.
