Enclosed are the results from OFA Logo testing performed on the following devices under test (DUTs): NetApp XBB2 (7091)

The test suite referenced in this report is available at the IOL website. Release 1.42 (2012-Apr-03) was used.

http://www.iol.unh.edu/services/testing/ofa/testsuites/OFA-IWG_Interoperability_Test_Plan-v1.42.pdf

The Following Table highlights the Mandatory test results required for the OpenFabrics Interoperability Logo for the DUT per the Test Plan referenced above and the current OpenFabrics Interoperability Logo Program (OFILP).

Additional beta testing than reflected in this report was performed using the DUT. A separate report will outline those results.

Result Key
The following table contains possible results and their meanings:

<table>
<thead>
<tr>
<th>Result</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>PASS</td>
<td>The Device Under Test (DUT) was observed to exhibit conformant behavior.</td>
</tr>
<tr>
<td>PASS with Comments</td>
<td>The DUT was observed to exhibit conformant behavior however an additional explanation of the situation is included.</td>
</tr>
<tr>
<td>FAIL</td>
<td>The DUT was observed to exhibit non-conformant behavior.</td>
</tr>
<tr>
<td>Warning</td>
<td>The DUT was observed to exhibit behavior that is not recommended.</td>
</tr>
<tr>
<td>Informative</td>
<td>Results are for informative purposes only and are not judged on a pass or fail basis.</td>
</tr>
<tr>
<td>Refer to Comments</td>
<td>From the observations, a valid pass or fail could not be determined. An additional explanation of the situation is included.</td>
</tr>
<tr>
<td>Not Applicable</td>
<td>The DUT does not support the technology required to perform this test.</td>
</tr>
<tr>
<td>Not Available</td>
<td>Due to testing station limitations or time limitations, the tests could not be performed.</td>
</tr>
<tr>
<td>Borderline</td>
<td>The observed values of the specific parameters are valid at one extreme and invalid at the other.</td>
</tr>
<tr>
<td>Not Tested</td>
<td>Not tested due to the time constraints of the test period.</td>

Discussion:
The NetApp XBB2 (7091) DDR SRP target was unable to properly link with the Intel/QLogic XXXX HCAs using the firmware provided to the UNH-IOL by Intel. A link was established, but only at 4X SDR. This is due to a known issue with Intel HCAs and certain early Mellanox-based DDR solutions such as the NetApp XBB2 (7091).

Note: Per past agreements, the Intel XXXX HCA should be updated to be compatible with the legacy Mellanox DDR Autonegotiation specification. As this has not occurred, the inability of the NetApp XBB2 (7091) to link at the proper speed is waived from the OFA Logo requirements; however, the link speed issue still remains. To draw attention to this compatibility issue with a device that is not on the OFA Logo list, this result is being marked as a Pass with Comments.

10.2: Fabric Initialization

<table>

<td>PASS</td>
<td>PASS</td>
</tr>
</tbody>
</table>

Result Discussion:
All subnet managers used while testing with OFED 1.5.4.1 were able to correctly configure the selected topology.
## 10.5: SM Failover and Handover

<table>

</tr>
</tbody>
</table>

**Result Discussion:**
OpenSM was able to properly handle SM priority and state rules.

## 10.6: SRP

</tbody>
</table>

**Result Discussion:**
SRP communications between all HCAs and all SRP targets succeeded while the above mentioned SMs were in control of the fabric.
