## Result Key

The following table contains possible results and their meanings:

Result:	Description:
<b>PASS</b>	The Device Under Test (DUT) was observed to exhibit conformant behavior.
<b>PASS with Comments</b>	The DUT was observed to exhibit conformant behavior however an additional explanation of the situation is included.
<b>FAIL</b>	The DUT was observed to exhibit non-conformant behavior.
<b>Warning</b>	The DUT was observed to exhibit behavior that is not recommended.
<b>Informative</b>	Results are for informative purposes only and are not judged on a pass or fail basis.
<b>Refer to Comments</b>	From the observations, a valid pass or fail could not be determined. An additional explanation of the situation is included.
<b>Not Applicable</b>	The DUT does not support the technology required to perform this test.
<b>Not Available</b>	Due to testing station limitations or time limitations, the tests could not be performed.
<b>Borderline</b>	The observed values of the specific parameters are valid at one extreme and invalid at the other.
<b>Not Tested</b>	Not tested due to the time constraints of the test period.

# Mandatory Tests – IW Device Test Results:

## 11.1: Ethernet Link Initialization

<b>Test Result</b>	<b>PASS</b>
<b>Result Discussion:</b>	
All devices were shown to link and pass traffic to all other devices in a back-to-back configuration under nominal (unstressed) conditions.	

Link Partner	Chelsio T4	Intel NE020
RNIC: Chelsio T4	<b>PASS</b>	<b>PASS</b>
RNIC: Intel NE020	<b>PASS</b>	<b>PASS</b>

## 11.2: Ethernet Fabric Initialization

<b>Test Result</b>	<b>Not Tested</b>
<b>Result Discussion:</b>	
Test requires two or more Ethernet switches. Only 1 switch is in the topology, therefore this was not tested.	

## 11.3: Ethernet Fabric Reconvergence

<b>Test Result</b>	<b>Not Tested</b>
<b>Result Discussion:</b>	
Test requires two or more Ethernet switches. Only 1 switch is in the topology, therefore this was not tested.	

## 11.4: Ethernet Fabric Failover

<b>Test Result</b>	<b>Not Tested</b>
<b>Result Discussion:</b>	
Test requires two or more Ethernet switches. Only 1 switch is in the topology, therefore this was not tested.	

## 11.5: iWARP Connectivity

<b>Test Result</b>	<b>Not Available</b>
<b>Result Discussion:</b>	
iWARP Connectivity test tool is not currently compatible with Scientific Linux 6.2 and/or OFED 1.5.4.1, therefore this was not available to be tested.	

## 12.1: TI iSER

<b>Test Result</b>	<b>Not Tested</b>
<b>Result Discussion:</b>	
There were no iSER targets available in the cluster, therefore this was not tested.	

### 12.2: TI NFS over RDMA

<b>Test Result</b>	<b>Not Tested</b>
<b>Result Discussion:</b>	
This test is not required for logo certification due to its beta status.	

### 12.3: TI RDS

<b>Test Result</b>	<b>Not Tested</b>
<b>Result Discussion:</b>	
RDS is not supported by any of the RNICs in the topology, therefore this was not tested.	

### 12.4: TI SDP

<b>Test Result</b>	<b>Not Tested</b>
<b>Result Discussion:</b>	
Legal restrictions do not allow SDP to be used on iWARP devices, therefore this was not tested.	

### 12.5: TI uDAPL

<b>Test Result</b>	<b>PASS</b>
<b>Discussion:</b>	
All devices were shown to communicate correctly using DAPL, by use of the linux daplttest tool.	

### 12.6: TI RDMA Basic Interoperability

<b>Test Result</b>	<b>PASS</b>
<b>Discussion:</b>	
All devices were shown to correctly exchange core RDMA operations across a simple network path under nominal (unstressed) conditions; each HCA acted as both a client and a server for all tests.	

### 12.9: TI MPI – Open

<b>Test Result</b>	<b>PASS</b>
<b>Discussion:</b>	
Complete heterogeneity; 1 process/system as described in the cluster topology
